EDUCATION

Manipal Institute of Technology, BLR

B.Tech in Computer Science
2025 – 2029

M.M Public School

CBSE Class XII | Delhi
Percentage: 85%

Montfort School

CBSE Class X | Delhi
Percentage: 88%

SKILLS

Languages

C/C++ ▪ Python ▪ Java ▪ Kotlin ▪ SQL

Frameworks

TensorFlow ▪ PyTorch ▪ NumPy ▪ OpenCV ▪ Scikit-learn ▪ Pandas ▪ Jetpack Compose ▪ Room ▪ MediaPipe

Tools & Platforms

Antigravity ▪ OpenCode
▪ Android Studio ▪ Git/GitHub
▪ Google Cloud

COURSEWORK

AI / ML

Supervised Machine Learning
Advanced Learning Algorithms
Unsupervised Learning

Core CS

Data Structures & Algorithms
Object Oriented Programming
Retrieval Augmented Generation

PROJECTS

Autonomous Research RAG Framework | Python | FAISS | BM25 | Pydantic GitHub Repository

- Built a multi-agent retrieval system utilizing local inference models to autonomously synthesize complex research across extensive arXiv databases.
- Implemented a hybrid search pipeline with cross-encoder reranking and Pydantic validation to guarantee strict citation accuracy.
- Engineered a parallel evaluation engine, processing 7 agent configurations concurrently and reducing testing time by 70% without quality degradation.

Multi-Modal Claim Verification | Python | Gemini Flash | OpenAI SDK | VLM GitHub Repository

- Developed an automated damage claim pipeline, separating visual evidence processing from textual history to successfully mitigate anchoring bias.
- Utilized Gemini Flash Lite for factual image extraction, routing structured outputs to an LLM for final claim evaluation.
- Integrated automated quality checks and strict rate-limiting, achieving 0% API errors and a 2.2x boost in classification accuracy.

AI Triage Agent | Python | FAISS | Sentence-Transformers | OpenAI | RAG GitHub Repository

- Built a terminal-based RAG agent utilizing FAISS and Sentence-Transformers to intelligently index and route cross-product support tickets.
- Optimized the pipeline through multi-threaded processing and deterministic grounding, achieving complete local context reliance to eliminate hallucinations.

Scroller's Dashboard | Kotlin | Room | AccessibilityService | Event-Driven Architecture GitHub Repository

- Engineered a digital wellness app tracking short-form content usage, reducing scrolling depth by 25% across Instagram and YouTube.
- Leveraged AccessibilityService for real-time UI event filtering and Room for low-latency, localized data persistence.
- Built an adaptive biometric pattern-interrupt overlay for triggering behavioral interventions.

CERTIFICATIONS

Google Cloud AI Workshop | Agentic AI 2026

- Built agentic AI workflows using Python, Langchain, and Vertex AI on Google Cloud.

5-Day AI Agent Intensive Course | Kaggle 2026

- Completed comprehensive training on designing, developing, and deploying autonomous AI agent workflows.
